1: AL050320. Human DNA sequenc...[gi:7263998]

Links

LOCUS HSJ1077I2 107057 bp DNA linear PRI 25-OCT-2002

DEFINITION Human DNA sequence from clone RP5-1077I2 on chromosome 20. Contains the 3' end of the SPTLC2L gene for serine palmitoyltransferase long chain base subunit 2-like (aminotransferase 2), the 5' end of C20orf82 gene for a novel protein, part of 2 novel genes and a putative CpG island, complete sequence.

ACCESSION AL050320

VERSION AL050320.19 GI:7263998

KEYWORDS HTG; aminotransferase; CpG island; serine palmitoyltransferase; SPTLC2L.

SOURCE Homo sapiens (human)

ORGANISM Homo sapiens
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

REFERENCE 1 (bases 1 to 107057)

AUTHORS Smith, M.

TITLE Direct Submission

JOURNAL Submitted (22-OCT-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

COMMENT On Mar 19, 2000 this sequence version replaced gi:6523711. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 Mapping Group. Further information can be found at <http://www.sanger.ac.uk/HGP/Chr20> This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP5-1077I2 is from the library RPCI-5 constructed by the group of Pieter de Jong. For further details see <http://www.chori.org/bacpac/home.htm>

Contact: humquery@sanger.ac.uk

 IMPORTANT: This sequence is not the entire insert of clone RP5-1077I2. It may be shorter because we sequence overlapping sections only once, except for a short overlap. The true right end of clone RP5-1077I2 is at 107057 in this sequence. The true right end of clone RP4-718P11 is at 100 in this sequence.
